

Medical waste high temperature steam centralized disposal system

The handling system includes manual handling system and automatic handling system
Automatic handling system

System introduction: The medical waste automatic handling system includes the turnover box automatic handling system and the sterilization vehicle automatic handling system. The turnover box automatic handling system includes automatic feeding machine, linear conveying unit (including chain conveying and roller conveying), 90° turning unit, 180° turning unit, etc. The automatic handling system of the sterilization vehicle includes a linear conveying unit (roller conveying), a 90° turning unit, an automatic cabinet entry unit, an automatic cabinet exit unit, and an automatic unloading machine.

System features: It can realize automatic loading and unloading of medical waste, automatic transmission of sterilization vehicles, automatic transportation and cleaning of turnover boxes, without manual intervention, which can effectively reduce the number of equipment operators, reduce labor intensity, and eliminate human and medical waste Infections caused by direct contact.
