

TITANIUM DIOXIDE for cosmetic, food and paint products

Product Description:

TYR-588 is a multipurpose titanium dioxide (TiO₂) pigment obtained as a result of the chloride process and treatment of Al₂O₃, ZrO₂ and special organic surface treatment. **It is used for cosmetic, food and paint products.**

TYR-588 is designed for professionals looking for a single grade of TiO₂ with characteristics covering a wide range of applications: cosmetic industry, used as food additives, for water-based paints for kindergartens and preschools.

Packaging: The packing bag consists of three layers of paper, the weight of each bag is 25kg. Different types of packaging are available according to the needs of the buyer.

Storage and transportation: The product must be stored in batches in a ventilated and dry storage facility. Do not store the product directly on the floor. It should be separated by items such as trays or plastic sheets. Store separately from chemically active substances. Carefully load and unload during transportation. The same batch of product must be placed together to prevent contamination/damage to the package.
